

# Bona SuperSport Deep Clean

## SPORTS FLOOR MAINTENANCE

Deep cleaning of wood & resilient sports flooring

Deep cleaner for occasional cleaning of indoor sports floors.

Bona SuperSport Deep Clean was designed to remove black heel marks, handball glue as well as build-up of body fats and other contaminants from indoor sports surfaces.

- Degreases floor
- Restores friction
- Removes scuff marks
- Removes certain types of handball glue

# Bona SuperSport Deep Clean

## SPORTS FLOOR MAINTENANCE

Deep cleaning of wood & resilient sports flooring

### TECHNICAL DATA

<b>Product type / base:</b>	Surfactant solution
<b>pH-value:</b>	approx. 12.5 (concentrate) approx. 11 (working dilution)
<b>Dilution:</b>	1 litre cleaner to 5 litres water (16.7%)
<b>Safety:</b>	Classified. Irritant, see Safety Data Sheet for more information.
<b>Shelf life:</b>	2 years from date of production, in unopened original container
<b>Storage/Transport:</b>	Protect from freezing.
<b>Disposal:</b>	Waste and emptied containers should be handled in accordance with local regulations.
<b>Pack size:</b>	3 x 5 litres

*Additional detailed information is noted in the appropriate Safety Data Sheet.*

## SPORTS FLOOR MAINTENANCE

### Deep cleaning of wood & resilient sports flooring

#### DIRECTIONS FOR USE

1. Dry clean first with a Bona Microfiber Dusting pad or a vacuum cleaner to remove all loose dirt.
2. Apply the diluted product to a section of the floor using a mop or spray equipment.
3. Allow the solution 3-5 minutes to dissolve the dirt. Scrub the section using a buffing machine or an auto scrubber equipped with a white or red pad and remove all the dissolved dirt.
4. Once the entire floor has been cleaned, make another pass with the auto scrubber using only clean water in the tank to ensure that no cleaning residues remain.

Note: On wood floors, keep the amount of water used to a minimum. Pay attention to gaps in the floor, do not allow excessive amounts of cleaning solution to seep into open gaps.

#### Recommendations for Handball Glue

If handball glue is frequently used, plan for deep cleaning weekly, as hardened handball glue will be more difficult to remove. Bona recommends using Select Profcare Handball Resin or other dispersion based resins at the court. This handball glue type has proven to be appreciated among players yet is easier to remove than traditional types of handball glue (source: Team Denmark).

Large spills of hardened material may need to be removed mechanically using a spatula or similar. Be careful not to damage the floor. The standard dilution (1:5) is usually sufficiently effective on handball glue. For spot cleaning of stubborn marks, the concentration can be increased to 1:2 (1 litre cleaner to 2 litres of water). Apply the solution to the affected area using a mop or spray equipment. Allow the solution 3-5 minutes to dissolve the dirt. Scrub the section using a buffing machine (e.g. Bona FlexiSand) equipped with a red pad. Without delay, remove the dissolved dirt with an auto scrubber or mop and bucket with clean water, before moving on to the next section.

As always, keep the amount of water used to clean wood floors to a minimum. Pay attention to gaps in the floor, do not allow excessive amounts of cleaning solution to seep into open gaps.

After using Bona SuperSport Deep Clean at high concentration it is recommended that the floor is allowed a minimum 2-3 hours drying time before resuming use.

The information in this document and all other advice and recommendations that we provide to help and assist the applicator are based on previous experience and extensive testing but makes no claim to be complete. Because of the wide range of possible uses and conditions of application of our products, we do not relieve users from the need to carry out their own trials or to seek technical advice from Bona before use. Bona can only guarantee its products and not the construction as a whole. Observe recommendations from flooring manufacturer and the provisions of relevant standards.
